

**Goal: Add a new Portal page into Zabbix that allows for easy navigation between Dashboards.**

Portal page should look similar to this. Groups of lists that make it easy to select a Dashboard.

A user will pick a Dashboard from one of the Group lists. Then it will automatically go to that Dashboard, or they will have to hit Go and it will go to that Dashboard (discretion of the programmer).

! The admin needs to be able to name the Groups, name the Dashboards, and select which Dashboard the user will be re-directed to. A text config file is acceptable.

Example of how it could be laid out:

GROUP 1

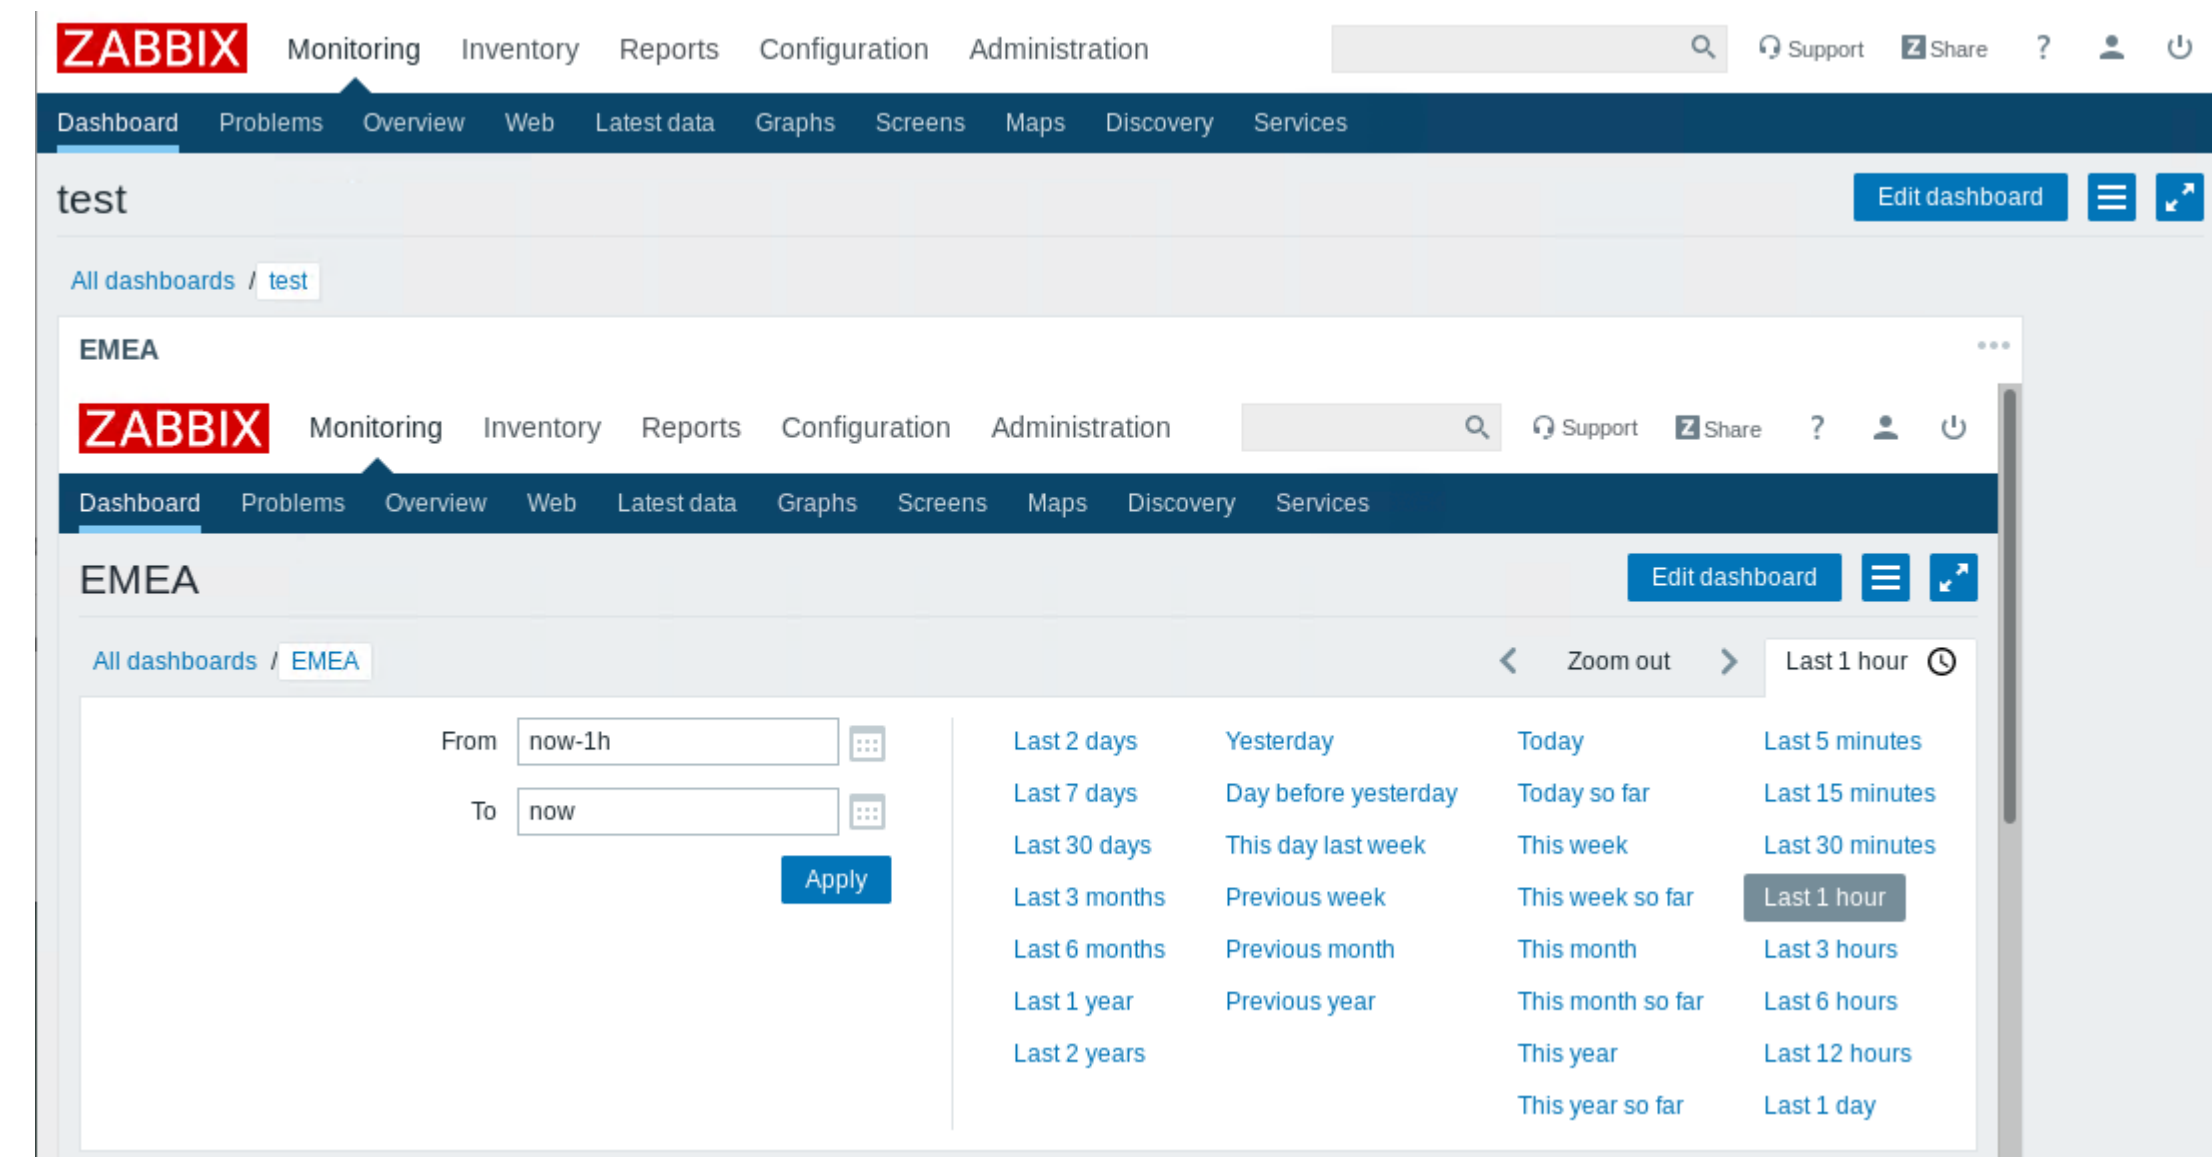

NAME: "Blue Group"

LIST: "Blue 1" : dashboard2, "Blue 2" : dashboard 3, "Blue 3" : dashboard 4

GROUP 2

NAME: "Red Group"

LIST: "Red 1" : dashboard2, "Red 2" : dashboard 3, "Red 3" : dashboard 4

This is an example of the Dashboard "test" being selected from a Group List and the Portal re-directing the user to the Dashboard.
